

● Business Continuity Solution

Your EHR Will Go Down. Will Your Prescribing?

Ransomware, planned maintenance, network failures, natural disasters. Every hospital and health system faces EHR downtime. When it hits, medication management breaks down, patient safety is compromised, and providers are left without the tools they depend on.

A Paper-Based Workaround Isn't a Plan. It's a Liability.

Our mobile prescribing platform is active 24/7/365, whether your EHR is up or down.

Mobile Prescribing via iPrescribe

- Pre-loaded patient roster synced nightly from your EHR via HL7 FHIR
- AI-powered clinical decision support from 40,000+ peer-reviewed sources
- Full legend and electronic prescribing for controlled substances (EPCS) with PDMP integration
- HIPAA-compliant, masked VoIP communication to protect personal phone numbers

Medication History

- 12 months of data
- Covers more than 80% of the insured patient population
- Synced nightly
- Reduces risk of drug-drug interactions

Prescription Engagement

- Personalized text messages sent to patients moments after prescribing
- Messages to patients reduce need for incoming calls during downtime
- Support transitions of care with post-discharge instructions
- Reduce risk of readmission caused by non-adherence

How It Compares

	Standard Downtime Approach	DrFirst Business Continuity Solution
Prescribing capability	Paper/manual call	Full legend and EPCS
Controlled substances	Limited	Fully supported with PDMP
Activation time	Minutes to hours	Immediate (always on)
Patient data access	Limited or none	Patient roster and Rx history synced
Provider familiarity	Unfamiliar at time of crisis	Used daily before downtime occurs

The DrFirst Business Continuity Solution isn't a backup plan. It's a fully operational medication management platform your providers already know, ready the moment your EHR isn't.

Don't wait for downtime to find the gaps in your plan.
