

# RACE TO COMPLIANCE

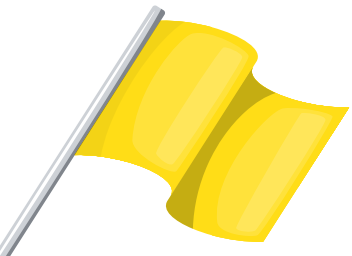

## Steering Through Regulatory Milestones for Interoperability & Prior Authorization

### It's go time!

In our [recent webinar](#), we highlighted regulatory checkpoints that will affect critical workflows, including specialty medication access under pharmacy or medical benefits.

Are you ready to stay ahead of the curve, avoid delays in specialty medication access, and improve interoperability as you race toward compliance?

### HTI-1 Rule Compliance: December 31, 2025

Throttle up by improving transparency and interoperability using APIs based on the Fast Healthcare Interoperability Resources (FHIR®) standard.

#### Next Steps for Compliance:

- Install FHIR-based APIs to keep secure, real-time data transmission running smoothly
- Avoid information blocking slow-downs with clear data-sharing policies
- Get your pit crew prepped for enhanced workflows and reduce data silos

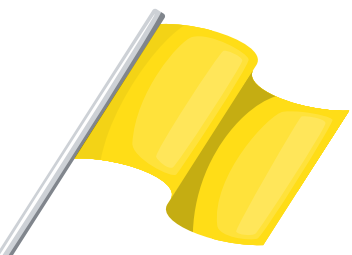

### CMS-0057-F Rule Compliance: January 1, 2027

Coming into the turn, the Interoperability and ePA Final Rule milestone requires real-time electronic prior authorization (ePA) using FHIR standards.

#### Next Steps for Compliance:

- Shift data exchange into high gear with fully implemented FHIR APIs
- Standardize ePA processes to simplify workflows
- Boost transparency with real-time status updates on PA requests and documented decision timelines

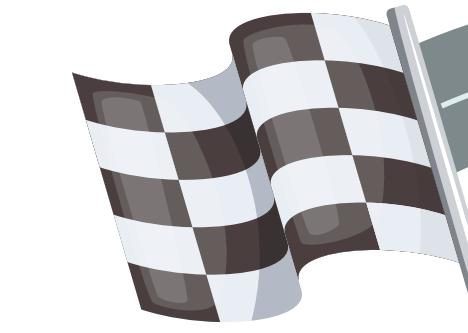

### HTI-2 Rule Compliance: January 1, 2028

HTI-2 turbocharges HTI-1 by requiring detailed, real-time data sharing to support patient data access, interoperability, and the use of health IT to improve outcomes.

#### Next Steps for Compliance:

- Upgrade your EHR to allow for more granular data exchange, ensuring smooth transitions
- Bolster data privacy to handle increased patient control over their data
- Team up with FHIR API experts to strengthen data sharing with external systems

### Finish Strong With the Right Partner

Unplanned pit stops on the road to full compliance expose you to financial penalties, operational inefficiencies, and patient care disruptions. Set the pace to beat with real-time information flows that provide faster access to prescribed therapies for patients.

## Ready to take the checkered flag?

Get expert [guidance](#) and FHIR-enabled solutions with DrFirst, and let's win this race together.
